

## Harvest:

- maturity
- skin finish poor → easy to be damaged
  - entrance of diseases
  - losses by breathing/evaporation
  - unattractive view

**AGRO** PLANT  
*Since 1924*

## Harvest

- careful digging and picking
- dry in open air
- careful: temp > 30 degr C:  
heavy breathing: black hearts
- no washing

## Skin finish

- crop should be (almost) mature
- stop irrigation in time
- haulm pulling/cutting foliage
- check skin each day
- takes 5 – 10 days

Harvest – storage period:

Number of treatments and movements of tubers should be as low as possible

Each movement means damage/losses
